> to Look for Them. How for kinning goes by favor is illustrated in the literary reviews of the year, which units i saying that no good movel has been produced by an American in the past twelve months. The statement is true, if we consider only the work of well-known American writers, the select few but it is very far from tree if we take the new work of new men, of whom the reviewers will work of new men, of whom the revewers we not hear for years to come, if ever; men who in some cases have had to publish their work at their own expense, or if we consider the litera-ture of periodicals, which is far greater in mass and of even higher order than that of books. Publishing is a business, and there is no mor n these days of keen competition, financial de-ression and diffusion of literary interests, in introducing the work of an unknown writer, o a subject not of news or contemporaneous interest, who has to be advertised to secure readers. It was possible for Weyman to fight his way to ecognition in England, after years of unrecogoncentrated; it would not have been possible here. And even in his case recognition of his ability came first in the country through American nowspapers printing his stories and creating a demand for them in book form.

Among the five best novels written in English during 1894, two, if not three, are by Americans utterly unknown to the aristocracy of lettern whose attention is quite naturally guided whether to those inside or outside of it, by personal in-terest or social consideration. This is an age of news. The "news" in literary work determines upon the personality of the writer apart from the merit of the work. Mrs. Ward by herself was nobody, and her commonplace work was without interest. As Mr. Gladstone's literary god-child her personality became news and her work became new not to be ignored. A dozen other exbook-if only a business directory of Hartford-is news in which more persons have, or think they have, interest than that somebody utterly unknown has written snother "Vanity Fair." Gossip Here, a Hint There and True Tales of City Life.

I am moved to ask by what special license property-owners whose land is "unimproved"— I. s., has no buildings on it—are permitted to lay only half a sidewalk and to keep even that half unshovelied, ungraded and undrained. There are examples of this sort of thing all around the upper part of the city. And these examples become striking once in stormy weather.

A young woman who writes for an occasional contemporary has exerted herself to the extent of a page to prove that it is necessary to be anobhish and imported in order to be a successful shoppe in New York. I am assured by a number of women whose friendship and opto-ions I value very highly that this is an utterly unjustifable slander against the shop extendants of the city: that, as a matter of fact, it is snobbishness and impertinence on the part of shoppers which has bred the larger part of whotever impudence exists among the slerks.
